Palax C700 Combi can process logs of up to a maximum diameter of 25 cm. The 4.3-metre long, folding and swinging discharge conveyor with two chains ensures that the firewood ends up where it needs to be, while the high-speed-valve regulates the splitting speed and maximises processing speed. The machine’s V-belts are tightened automatically, significantly increasing the durability of the belts. The machine is also equipped with a tipping, spring-suspended crosscut deck. The splitting wedge is easy to replace, thanks to its quick-release feature. The machine can be powered by either a tractor, a combustion engine or an electric motor.

Palax’s true bestseller is an easy-to-use, versatile and fast firewood processor.

Features
- Automatic V-belt tightening
- Transmission release switch, tractor use
- Splitting blade quick release
- Automatic back stopper
- Automatic tipping deck
- Automatic high-speed valve
- Safety rollers on the cutting table
- Operating levers with ball bearings
- Conveyor lifting winch
- Folding and laterally pivotable conveyor
- Automatic conveyor chain tightening

Accessories
- Hydraulic oil VGA 32, 40 l
- Articulated shaft, e.g. Bondioli 143
- Hydraulic splitting blade height adjustment
- Transport platform suitable for road traffic use
- A trailer suitable for road transport

AN UPDATED VERSION OF A CLASSIC FIREWOOD PROCESSOR
